Victor Contract Sifter

Victor Contract Sifter combines Victor's insurance and risk management expertise with artificial intelligence-powered contract review software to help firms embed good risk management practices into their professional service agreements.

This market-changing offering provides insureds with a fast and easy way to review professional services agreements in an automated environment. The software will not only spot potential practice management and insurance issues in the contract but will also provide actionable guidance to help mitigate contractual risks.

How it works

Once a user has access to Contract Sifter, they can upload their professional services agreement into the confidential platform. Within minutes, the sifter identifies common insurability and practice management issues and offers Victor's guidance in the following format:

- An explanation of the issue

- Professional liability or insurability concerns associated with the issue

- A recommended response

- Sample standardized industry language

Why it matters

- AI-powered issue spotting speeds the process of contract review and enhances contractual risk mitigation. Over time, users will gain lasting insight into key issues and learn how to respond effectively to those issues during contract negotiations and in accordance with industry standards.

- The product serves as an effective training tool for contract reviewers who may not be familiar with liability issues in the design and construction industry.

- In addition to being an easy-to-use platform for collaborative editing, the final edited document with commentary/justifications for modified language can be exported out of the application as a Word document and shared with the client.
